

Held-one-out AFM comparison: legacy NN retrieval vs current M17b generation

Intersection n=27 | Legacy A3: target excluded from regressor fit and AFM bank | M17b: target excluded from 26-growth fit; no AFM retrieval or measured AFM patch at inference

Sq = areal RMS height (legacy files used the label Rq). Each AFM panel is independently contrast-scaled to its 1st-99th percentile; compare height amplitude using the labeled Sq. Legacy commit 6973e08 | current result 6a42ab2 | desktop package 99bb75b.
